

Rival to the Wii console

First came the Nintendo Wii, next came the Ps3 , But what's coming now?

Sony

The Nintendo Wii has been very popular. But now Sony is introducing a motion controller that is like the Nintendo Wii controllers.

However, it works on Sony's Playstation3 consoles. A technology expert said, "Nintendo have had such a lead in this market that both Microsoft and Sony are competing to be the number

Nintendo wii (left) Xbox (right)

two in the living room."

Microsoft

Another thing to look out for this year is the much talked about Microsoft 'project natal', which will be available on all existing Xbox

360 consoles. They say that it is going to be launched in November 2010. Microsoft isn't saying much about the project but it must be good for they are not telling us much about it.
